Computer Science,
Security,
Human-Centered Computing

EXPERIENCE

Software Consultant

Blue Horseshoe Solutions
June 2015 – June 2017

Managing warehouse management and transportation management system implementations. Assisting clients in bridging the gap between their distribution operation and technology by tailoring the solution to meet their specific requirements. Using X++, an object-oriented programming language, and SQL to fulfill functional and technical roles on Microsoft Dynamics AX projects.

Clients

Cancarb
Completed multiple data migrations between environments for user testing and Go Live. During the upgrade, completed a data integration from old system to new system using XSLT and XML.

Bell's Brewing Company
Developed a new solution to help manage keg inventory. After Go Live, helped with support tickets and maintenance.

San Antonio Shoes
Served as the technical lead for the project. Wrote technical designs. Improved performance. Completed general support tickets and continued support for changes in modifications.

Introduction to Informatics Lab Instructor

School of Informatics and Computing at Indiana University
January 2012 – May 2015

Attended lectures, lab sections and study sessions for INFO-I 101: Introduction to Informatics, a class taught in the School of Informatics and Computing. Taught material covering HTML, CSS, JavaScript and other new technologies to a lab section of 25-30 students each semester. Responsible for various grading duties. Previously held the position of Undergraduate Mentor.

Security Operations Intern

Liberty Mutual
May 2014 – August 2014

Assisted on Liberty's highest tier emergency incident response team mitigating high-risk vulnerabilities. Automated an installation process. Worked in the security operation center on security related projects and tasks.
